

Gravity

Picture Vocabulary

Earth and Space

Gravity

The force that causes objects with mass to attract one another.

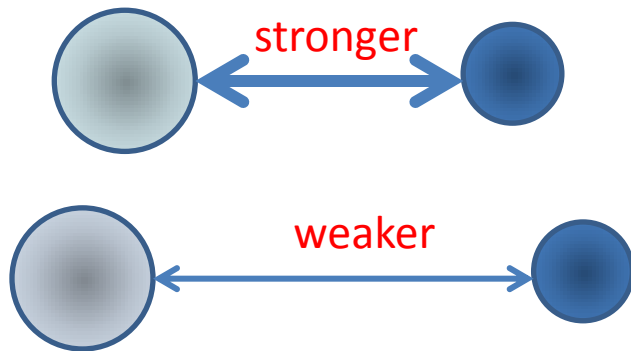

Gravitational Attraction

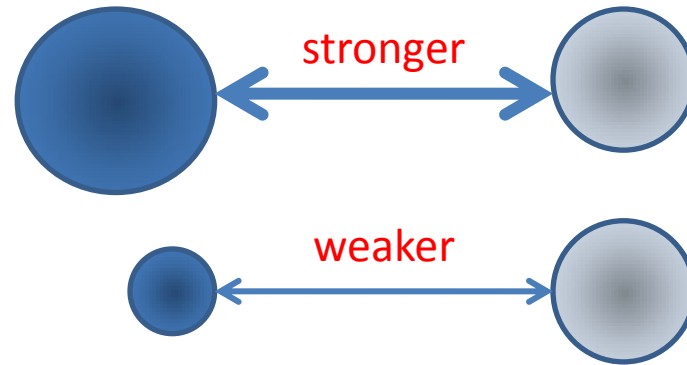

The force that pulls two objects towards each other; the greater the mass of an object, the greater the attraction; the further apart the objects, the weaker the attraction.

Newton's Law of Universal Gravitation

Effect of Distance

Effect of Mass

The law that says every object in the universe attracts every other object, and that the force is affected by mass and distance: the greater the mass of an object, the greater the attraction; the farther apart the objects, the weaker the attraction.

Mass

- 1) The amount of matter in an object
- 2) A body or object
